Intelligent demand forecasting systems for fast fashion

In the proposed system, the long-term forecasts are performed before the sales period. The outputs are used as weekly forecast for the replenishment of stores in the first two weeks of sales and as input of the short-term forecasting model described in next section (Figure 8.1).

Intelligent demand forecasting supported risk management

After reviewing the literature on demand forecasting-based inventory control and risk-related inventory management, we propose a new optimization model for developing the intelligent fast fashion forecasting-based risk minimization inventory control system. Here, intelligent refers to the fact that the system is smart and it can use the available information and automatically provide the

Introduction Intelligent Fashion Forecasting SpringerLink

Abstract. Forecasting is a classic topic of information systems [1] and it is a crucial part for companies in the fashion apparel industry. Despite the fact that there is no perfect forecast, forecasting for highly structured data (e.g., the time series with high seasonality or trend) is known to be easy because there are many well
